Summary

Wanted a speedbump riser, as well as a JC Hinged Riser. This did not exist. Now it does. Praise be the eternal filament

If you're looking at this, you like the Speedbump and the JC hinged Riser and you really wanted to make both work. Now you can. Included is a VERY rough combo of the JC Hinged Riser for the K1 as well as the speedbump. Some minor work with cutting off edges should be performed as I'm not great with design and I did what I could. Also included is an in-betweenener for the riser that fits right. Follow installation instructions for the JC hinged Riser.

I printed with the bump side down to avoid internal supports, you try what works for you and let us know!

I'll update as they come or to answer questions that are needed. Thanks!
