The long awaited D3vil Burner by the D3D team, featuring Knomi support, is here!

**\*\*Introduction\*\***

D3vil Design is proud to release the D3vil Burner toolhead cover for the Creality K1 for free. Packed with features, the team has worked meticulously to make sure that the cover is ready for release and as easy as a drop-in as possible with the limited space in the stock Creality K1 toolhead setup.

**\*\*Features\*\***

- Drop in replacement for the Creality K1 - no permanent modifications!
- Full Knomi support - view print progress real time, and add a little flair to your toolhead!
- Customizable LED featuring the D3vil Design logo - use any LED to match the style of your setup!

- Lightweight - 3.5 grams LIGHTER than the stock toolhead! (tests using ASA/ABS+, stock K1 shroud at 23.8 grams, D3vil Burner printed in ASA is 20.3 grams)

**\*\*Instructions and Support\*\***

Best way is to print it would be with support and the cover facing upward.

Where to Buy Knomi here [BIQU](#)

We do this for fun and for the community, we are self funding all the projects and we do not want money as much as we need your help, knowledge and support. If you would like to help the team to fund future projects, you can visit us at our Patreon.

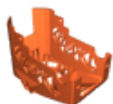

We will begin posting behind the scenes projects, beta access to projects in flight, and more exclusively for our Patreon supporters.

The team work is not limited to the K1, other projects will be published soon!
